4 Step 4 — Build the Hero Section	6
5 Sources & Links	8

Week 1 — Overview

Programme	ML / AI Internship — SI-26
Track	Frontend Development
Week	1
Project	Forces Academy Faisalabad Website
Organisation	Code Saviours (SMC-PRIVATE) Limited
Goal	Set up the project structure and build the navigation bar and hero section

Step 1	Project Structure
Step 2	Link Bootstrap 5
Step 3	Build the Navigation Bar
Step 4	Build the Hero Section

1. Step 1 — Project Structure

Create the following folder and file structure inside your project before writing any code. Every file and folder must be named exactly as shown.

1. `index.html` — Home page
2. `about.html` — About page (empty for now)
3. `courses.html` — Courses page (empty for now)
4. `admissions.html` — Admissions page (empty for now)
5. `results.html` — Results page (empty for now)
6. `gallery.html` — Gallery page (empty for now)
7. `contact.html` — Contact page (empty for now)
8. `css/style.css` — your custom CSS file
9. `js/main.js` — your custom JavaScript file
10. `images/` — folder for all images

Your final folder layout should look like this:

```
forces-academy/  
  index.html  
  about.html  
  courses.html  
  admissions.html  
  results.html  
  gallery.html  
  contact.html  
  css/  
    style.css  
  js/  
    main.js  
  images/
```

2. Step 2 — Link Bootstrap 5

Bootstrap 5 is loaded via CDN — no installation needed. You paste two links into every HTML file and Bootstrap handles the rest.

1. Go to <https://getbootstrap.com> and copy the CDN links for CSS and JS Bundle.
2. Paste the **CSS link** inside the `<head>` tag of `index.html`.
3. Paste the **JS Bundle link** just before the closing `</body>` tag.
4. After the Bootstrap CSS link, add your own `css/style.css` link.
5. After the Bootstrap JS link, add your own `js/main.js` script tag.

Your `index.html` head and body close should follow this pattern:

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8" />
  <meta name="viewport" content="width=device-width, initial-scale=1.0" />
  <title>Forces Academy Faisalabad</title>

  <!-- Bootstrap 5 CSS -->
  <link
    href="https://cdn.jsdelivr.net/npm/bootstrap@5.3.0/dist/css/bootstrap.min.
    css"
    rel="stylesheet" />

  <!-- Your custom CSS (always AFTER Bootstrap) -->
  <link rel="stylesheet" href="css/style.css" />
</head>
<body>

  <!-- page content goes here -->

  <!-- Bootstrap 5 JS Bundle -->
  <script
    src="https://cdn.jsdelivr.net/npm/bootstrap@5.3.0/dist/js/bootstrap.bundle.
    min.js">
  </script>

  <!-- Your custom JS (always AFTER Bootstrap JS) -->
  <script src="js/main.js"></script>
</body>
</html>
```

Repeat the same `<head>` links and end-of-body scripts in **every** HTML file you create this week.

3. Step 3 — Build the Navigation Bar

1. Use Bootstrap's **navbar** component as your starting point (see Bootstrap docs link in Sources).
2. The navbar must include all of the following:
 - Forces Academy logo placeholder (text or image)
 - Navigation links to all 7 pages: Home, About, Courses, Admissions, Results, Gallery, Contact
 - A **Student Portal** button that visually stands out from the nav links
3. The navbar must be **sticky** — it stays fixed at the top of the screen as the user scrolls. Use Bootstrap class **sticky-top**.
4. Must be **fully responsive** — collapses to a hamburger menu on mobile screens automatically via Bootstrap's navbar toggler.
5. Customise colours in `css/style.css` to match the Forces Academy brand. Use colours from the Graphic Design team if available; otherwise use a professional dark navy blue or deep green.

Starter navbar structure:

```
<nav class="navbar navbar-expand-lg sticky-top" id="mainNav">
  <div class="container">

    <!-- Logo -->
    <a class="navbar-brand fw-bold" href="index.html">
      Forces Academy
    </a>

    <!-- Hamburger toggle (mobile) -->
    <button class="navbar-toggler" type="button"
      data-bs-toggle="collapse" data-bs-target="#navMenu">
      <span class="navbar-toggler-icon"></span>
    </button>

    <!-- Nav links -->
    <div class="collapse navbar-collapse" id="navMenu">
      <ul class="navbar-nav ms-auto align-items-lg-center gap-lg-2">
        <li class="nav-item">
          <a class="nav-link active" href="index.html">Home</a>
        </li>
        <li class="nav-item">
          <a class="nav-link" href="about.html">About</a>
        </li>
        <li class="nav-item">
          <a class="nav-link" href="courses.html">Courses</a>
```

```
        </li>
        <li class="nav-item">
            <a class="nav-link" href="admissions.html">Admissions</a>
        </li>
        <li class="nav-item">
            <a class="nav-link" href="results.html">Results</a>
        </li>
        <li class="nav-item">
            <a class="nav-link" href="gallery.html">Gallery</a>
        </li>
        <li class="nav-item">
            <a class="nav-link" href="contact.html">Contact</a>
        </li>
        <!-- Student Portal Button -->
        <li class="nav-item">
            <a class="btn btn-warning fw-semibold px-3" href="#">
                Student Portal
            </a>
        </li>
    </ul>
</div>

</div>
</nav>
```

4. Step 4 — Build the Hero Section

The hero section is the first thing every visitor sees. It must look **professional and impressive**.

1. Place the hero section directly below the navbar in `index.html`.
2. The hero must include all of the following:
 - A background image (from Unsplash — see Sources) or a gradient
 - A main heading: *Forces Academy Faisalabad* or similar
 - A subheading tagline (one sentence describing the academy)
 - Two CTA buttons: **Apply Now** and **Learn More**
3. Use Bootstrap's grid and utility classes for layout and spacing.
4. Must be **fully responsive** — heading and buttons must stack cleanly on mobile.

Starter hero structure:

```
<!-- Hero Section -->
<section id="hero">
  <div class="hero-overlay">
    <div class="container h-100">
      <div class="row h-100 align-items-center">
        <div class="col-lg-8 text-white">

          <h1 class="display-4 fw-bold mb-3">
            Forces Academy Faisalabad
          </h1>

          <p class="lead mb-4">
            Excellence in Education   Preparing Tomorrow's Leaders Today
          </p>

          <div class="d-flex flex-wrap gap-3">
            <a href="admissions.html"
              class="btn btn-warning btn-lg fw-semibold px-4">
              Apply Now
            </a>
            <a href="about.html"
              class="btn btn-outline-light btn-lg px-4">
              Learn More
            </a>
          </div>

        </div>
      </div>
    </div>
  </div>
```

```
</div>
</section>
```

Add this to your `css/style.css` to style the hero:

```
#hero {
  background-image: url('../images/hero-bg.jpg');
  background-size: cover;
  background-position: center;
  min-height: 90vh;
}

.hero-overlay {
  background: rgba(0, 20, 60, 0.65);
  min-height: 90vh;
  display: flex;
  align-items: center;
}
```

If you do not have a background image yet, replace the `background-image` line with a gradient:

```
background: linear-gradient(135deg, #0a1f44 0%, #1a4a6b 100%);
```

Submission Checklist

Submit by **Friday, 3 July** via Google Classroom:

- GitHub repository link — must show at least **5 commits** from different days
- GitHub Pages live link — go to repo **Settings > Pages > Deploy from main branch**
- Live site must display: working navbar with all 7 links + hero section visible on both desktop and mobile
